

easy to use  
**variable data printing**  
for highly personalised documents

Paris Desktop and Paris Desktop Professional are the latest generation of Variable Data Printing products from XLPrint.

Paris Desktop includes all of the tools required to design and print your own Variable Data Print (VDP) applications from your desktop to any printer in your organisation.

Paris Desktop works with CSV data from any database and supports all of the common graphic formats as well as Rich Text from Microsoft Word® and other Windows® applications.

Paris Desktop allows you to easily configure highly dynamic and personalised documents. Change forms and input trays based on values in the data. Paris Desktop will even generate data-driven charts and barcodes.

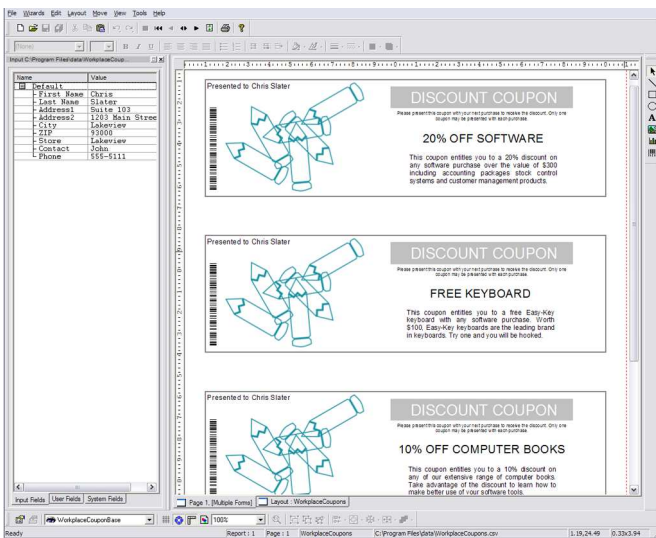

## PARIS DESKTOP LAUNCHPAD

The user-friendly **Paris Desktop Launchpad** is the one-stop location from which you can:

- Print data files using existing formatting rules ("Layouts") to any available Windows printer or device. Four simple steps let you select the data file, select the Layout, select the printer, then print. If you wish, you may preview the job before you print.
- Print any number of copies of data-less ("Static") Forms (such as leave applications and order forms) to any available Windows printer or device.
- Quickly create new Layouts or Forms using the user-friendly Wizards to guide you.
- Modify existing Layouts and Forms in a completely interactive, WYSIWYG editor.
- Share Layouts, Forms and their resources easily with other users.

## PARIS DESKTOP DESIGNER

The **Paris Desktop Designer** will be familiar to any users who have used Microsoft products such as Word and PowerPoint.

The handy tool-bars place all of your objects and their properties at your finger-tips. Add and manipulate lines, boxes, circles, complex shapes, text, charts, graphics and barcodes.

Place and move objects anywhere on the page with precision. Turn your grid on to align items. Group and un-group related objects. Zoom in and out. The entire design process is intuitive and fast.

Drag and drop data from the left-hand pane anywhere onto the page. Drag text into text blocks for highly personalised communication. Insert data into barcodes and charts. Use Fields to manipulate data. Create Events to change Forms and input paper on the fly.

## FEATURES AT A GLANCE

- Very low entry price
- "Pay as you go" Tokens
- Unlimited-use version available \*
- Free Designer
- Familiar and simple user interface
- Preview before you print
- Accepts CSV data from any database
